

The instruction of 3G-W2 connect to PC via USB

1. Connect USB (WITH DATA FUNCTION, USB-android type)
2. Power on radio

Enter “SETTING”

Enter “About phone”

<p>Click “Built Number”4times Now you are a developer</p>	 A screenshot of the 'About phone' settings page on an Android device. The status bar at the top shows the time as 7:08 AM. The page title is 'About phone' with a gear icon. Below the title, there is a section for 'Build number' which displays 'ALPS.KK1.MP7.V1'. Above this, the 'Kernel version' is shown as '3.4.67' with additional text 'server@server123456 #3' and 'Tue May 8 18:03:26 CST 2018'. Other visible text includes 'MOLY.WR8.W1315.MD.WG.MP.V47, 2016/11/01 10:27' and 'Custom build version N60.4.4.B18.4+32.allapp.20180508'.
<p>Back and enter develop options</p>	 A screenshot of the 'Settings' app on an Android device. The status bar shows 7:09 AM. The 'Settings' title is at the top with a gear icon. A list of settings categories is shown: 'Scheduled power on & off', 'Accessibility', 'Printing', 'Developer options' (highlighted with a curly brace icon), and 'About phone' (with an information icon).
<p>Choose“USB debugging” ✓</p>	 A screenshot of the 'Developer options' settings page. The status bar shows 7:09 AM. The title is 'Developer options' with a gear icon and a blue toggle switch on the right. Under the 'DEBUGGING' section, 'USB debugging' is listed with the subtitle 'Debug mode when USB is connected' and a checked checkbox. Below it, 'Power menu bug reports' and 'Allow mock locations' are listed with unchecked checkboxes. At the bottom, there is a 'Select debug app' option.
